

The Department is well equipped with to provide an excellent laboratory facility to every individual student. Computers of latest configurations are given to the students in the laboratory classes. This facilitates performing high end jobs. **The most striking feature is that the ratio of a terminal to the number of students to that terminal is 1:1.** Since a student needs not to share the terminal with others he/she gets enough scope to have a firm grasp over the subject through practical classes. **The software used in the practical sessions are all licensed software and are in accordance to the WBUT prescribed syllabus.**

The laboratories of Computer Science & Engineering Department have a strong infrastructure to carry out good quality Research Works. Since the Department has mostly young faculty members, they are always energetic and vibrant and enthusiastic to provide all sorts of guidance to their students to develop a strong Research base to meet the requirement of the industries.

The infrastructure of the laboratories of the department is so strong that they are even used by **Globsyn Technologies Limited** or **Nettech** for their extensive summer training school.

For further reference please go through the **Mandatory Disclosure** for the detail of each of the laboratory of the department.
